Ricardo Santin

CEO

Message from the CEO

Since the beginning of our term with CEO Francisco Turra—then as ABEF, evolving to the current ABPA—we have experienced moments of crisis that have marked our history. The inputs crisis in 2016, the Weak Flesh (or Carne Farce) Operation the following year and the Truckers' Strike in 2018 were milestones of successive moments that the industry was able to overcome. None of them, however, was as far-reaching as we are currently experiencing, the global Covid-19 pandemic, beginning in mid-December 2019.

Lost lives, millions of sick people, and the reorganization of our model of society are macro-issues of a timeframe that still has no end in sight, and that has been marked by details that changed our vision of the world.

With the restriction of gatherings and the strengthening of remote work, all the industries of the economy have had to adapt. And it was no different for the animal protein industry.

We were nimble, we added protocols in the early days of the pandemic, and expanded our first guidance document to a robust protocol, validated by São Paulo's Albert Einstein hospital. In this effort to supply the population and maintain exports, the Minister of Agriculture, Tereza Cristina, and her team were instrumental. Two legislations—the Presidential Decree of Essentiality and the Interministerial Ordinance 19, laying down precautions to be adopted by the plants—were decisive for the continuity of production,

offering the population nutrients that are so essential in these fundamental times for the preservation of health.

Thanks to this joint effort between ABPA, companies, member entities, the Federal, State and Municipal governments, as well as all employees and integrated growers from our industry, we achieved what seemed almost impossible at the beginning of the pandemic: we produced more and exported more. We set new records in the production of poultry, pork, and eggs, as well as in pork exports and egg consumption.

All of this, without neglecting the biosecurity of our herds, maintaining our focus on our purpose, strengthening the three sustainable pillars of our business—which follows the United Nations Sustainable Development Goals (SDGs)—with working principles that have enabled us to thrive in this transition of ABPA management.

Other points of attention, such as production costs, maintained the production chain on its feet regarding the strengthening of its sustainability pillars. But the figures you will see on the following pages do not lie: poultry and pork farming in Brazil are solid industries and deserve the prominence they have in the economic and social scenario of the country. This prominence was built with professionalism, with investments and with significant figures, such as those contained herein—ABPA's most important annual publication.

Enjoy reading!

Francisco Turra

Chair of the
Supervisory Board

Lessons Learned

We have come through a year that was intense in many ways. It was a year of many struggles, be it for life itself, for the economy, for the maintenance of jobs or for the supply of food. There were daily battles, full of challenges, but with many victories. In the midst of the economic crisis, we were able to offer food, and our products achieved record production and consumption in Brazil. We exported pork like never before, in addition to maintaining the sustainability of international pork sales.

These figures are presented in this report, which will address facts in addition to the data. Behind them, is a huge and well-designed field of work that engaged every member, every state entity and all the links in a historic effort for employment and food security.

The year 2020 has reinforced lessons that we learned in the past, and that proved to be even more important in this great storm caused by the pandemic: only by coming together can we overcome, hold firm and grow. Being part of an Association, once again, shows its immeasurable value.

About Us

Four offices: **São Paulo** (state of São Paulo), **Brasília** (Federal District), **Brussels** (Belgium) and **Beijing** (China).

Approximately 130 members from the entire production chain (poultry, pork and egg agribusiness, biological and pharmaceutical inputs, equipment companies, feed, genetics, certifying agencies, logistics, state, and sectoral entities).

ABPA Principles of Integrity

The Brazilian Association of Animal Protein follows strict principles of **compliance**, under the framework of its Code of Conduct, its Policy on Relations with the Government and Anti-Corruption, its Policy for Gifts, Presents and Entertainment, as well as its Compliance Manual with the Brazilian Anti-trust Legislation.

This broad and detailed internal framework governs the behavior of each ABPA employee and those of its members while attending meetings, conferences, other facilities, and virtual spaces of the entity and in dealing with third parties, such as suppliers, public officials, and others, whether in Brazil or abroad.

ABPA fully respects and follows Brazilian regulations and offers guidance to its members within the same principle of integrity and enforcement of the compliance rules.

Memberships and International Partnerships

The Brazilian Association of Animal Protein (ABPA) counts on many partners all around the world!

United in pursuing shared objectives, the partner organizations promote good international trade practices in the poultry and pork farming industries, as well as promoting the principles of complementarity and food security. After all, **there should be no borders for food!**

2020 Annual Activities Report

Global Value Chain

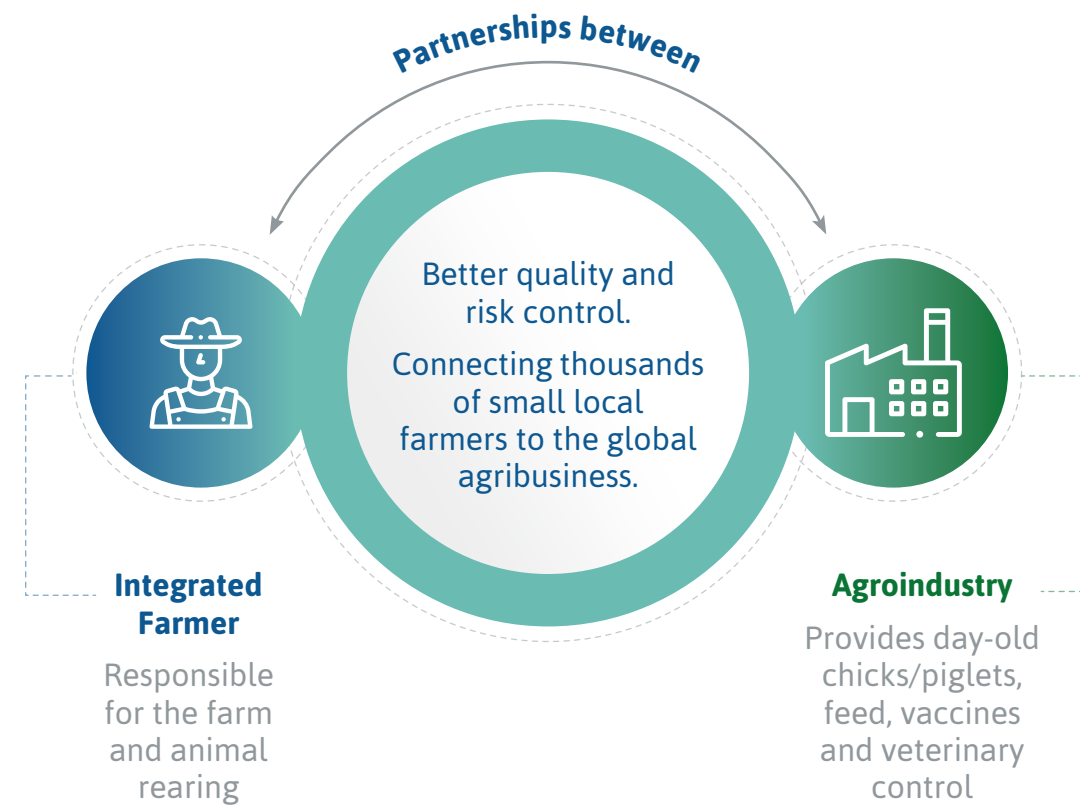

Social and Economic Impacts

The Integrated Production System of the Brazilian Poultry and Pork Industries

- The Brazilian companies in the Poultry and Pork Industries are located in the hinterland of Brazil. Found mainly in the southern, southeastern, and mid-western regions of Brazil, they drive the economy of regions far from the large urban centers and **generate thousands of direct and indirect jobs** in the areas where they are located.
- Another advantage of the production model is the **integration system** – a reference model for quality assurance and health status. The equation is simple: the company offers inputs and technical assistance, and guarantees the supply of animals, while the farmer is responsible for rearing them.
- The integrated model protects the farmer from the adversities of the market, providing a stable income with a notable influence on the quality of life of these family farmers. At the same time, the growth of the activity, by employing new production technologies, has boosted the **professionalization of farmers, awakening the interest of the new generations, the family succession and keeping people in the field.**

Integrated Production System

+ 5% jobs created in poultry and pork farming between 2014 and 2018

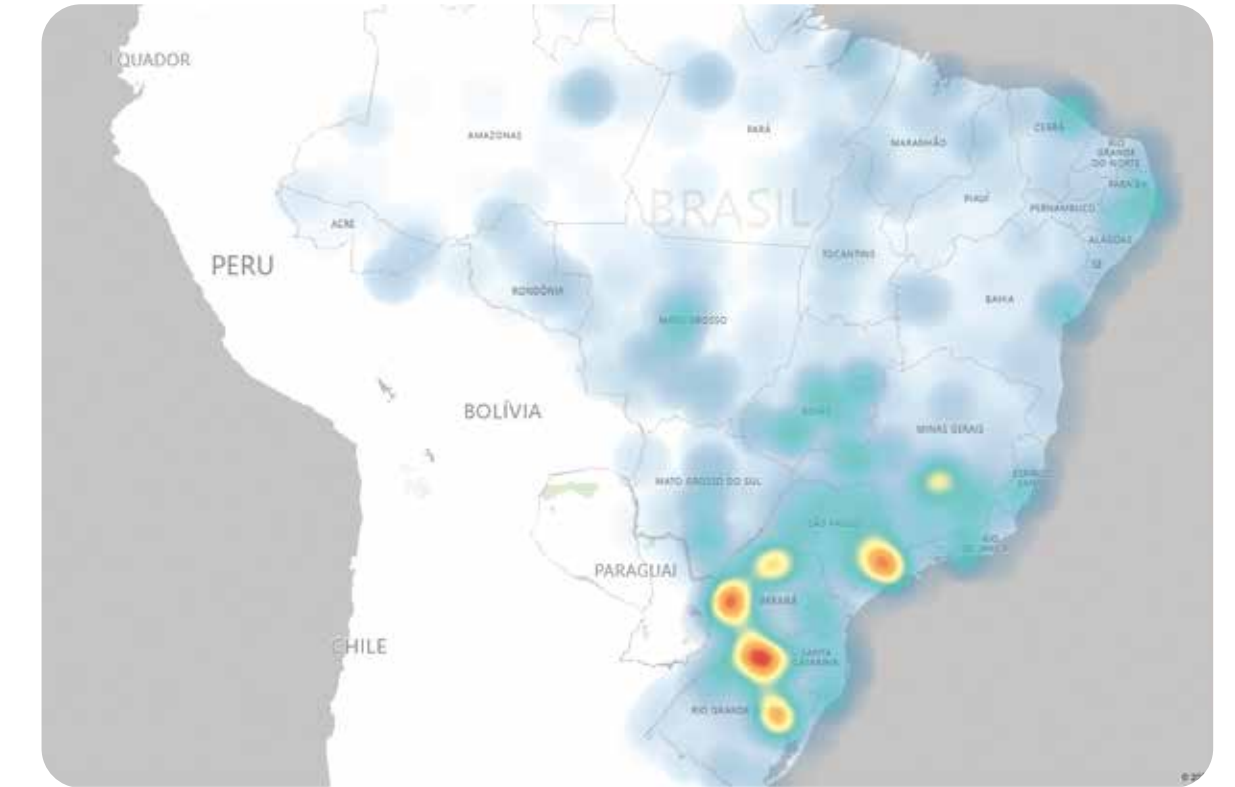

+ 20,000 new employees hired during the COVID-19 pandemic in 2020

± 2/3 of total jobs are in poultry farming

± 1/3 of total jobs are in pork farming

Social Actions across Brazil

- Location of ABPA Member Plants

- As a way of giving back to the localities and their inhabitants who welcomed them and helped them feed millions of people around the world, the agribusinesses of the poultry and pork industry **also contribute through social actions**, providing improvements in the infrastructures of municipalities, building hospitals, libraries, cultural spaces, sports centers and schools, donating equipment, tools, materials and supplies, hiring professionals and holding professional courses, workshops, hands-on classes, citizenship initiatives, exercise activities, etc.
- Many of these companies even have **foundations dedicated exclusively to carrying out social projects** throughout the year, sharing the values of union and solidarity with employees, their families, and the community in general, which is inherent in the culture of farms and rural areas.

Industry Competitiveness

Structuring Factors

From the second half of the twentieth century to the present day, there has been one industry in the Brazilian economy – **agribusiness** – that achieved significant advances in order to be able to compete globally with the great powers.

Brazilian agriculture has managed to transform its potential into reality and, among those countries that have succeeded in drastically reducing food insecurity, especially owing to the substantial increase in agricultural productivity, Brazil is perhaps the most evident case.

No other country, for agribusiness, has achieved such an evolution in so few decades as Brazil.

The combination of four levers, I) natural resources + II) knowledge & technology + III) rural entrepreneurship + IV) the coordination of value chains, **was responsible for the transformation of Brazil from a country dependent on food imports in the 60s to one of the world's main producers and exporters of agricultural products**, on the path of the Green Revolution and the globalization of markets.

However, in order to remain in a prominent position, other challenges lie ahead in this 21st century, to face which Brazilian poultry and pork farming will not shy away from achieving and leading by example.

Ingredients for Well-being

Health, one of the most significant issues among current topics. And the **role that food** plays in health and well-being is no secret.

From a nutritional point of view, animal protein is deemed to be of high biological value because it has, among other elements, essential amino acids that are not synthesized by the body, or that are synthesized in insufficient quantities for biological needs.

These amino acids must be provided by a diet because the human body lacks the necessary metabolic pathways to synthesize them.

The consensus is that there are nine essential amino acids, including phenylalanine, valine, tryptophan, threonine, isoleucine, methionine, histidine, leucine, and lysine. In terms of nutrition, the nine essential amino acids are obtained by a single complete protein, which by definition contains all the essential amino acids or from a combination of incomplete proteins, which are usually plant foods. **Complete proteins are generally derived from animal sources of nutrition.**

! Poultry and pork meat and eggs are rich in essential amino acids that act together to provide above all for people's mental well-being!

Research shows that nutrients found in abundance in these foods are essential to help the body produce **Serotonin**, a neurotransmitter linked to the biochemical processes of sleep, mood, and well-being.

Tryptophan, found in abundance in poultry and pork meat and eggs, also plays a role in the production of melatonin, which helps regulate sleep patterns, niacin or vitamin B-3 and nicotinamide also known as vitamin B-6.

The recommended daily intake (RDI) of Tryptophan is 4 mg per kilogram of body weight. Therefore, a person weighing 70 kg should consume about 280 mg of Tryptophan per day.

See below the amount of Tryptophan that can be found in a 100g portion of some foods

 Lean Chicken Breast (Cooked) - 404 mg 144% IDR	 Baked Chicken Breast - 362 mg 129% IDR	 Baked Turkey (skinless) - 310 mg 111% IDR	 Grilled Pork Loin - 376 mg 134% IDR	 Fried Eggs - 181 mg 65% IDR
 Cooked Eggs - 153 mg 55% IDR	 Cooked Spinach - 40 mg 14% IDR	 Broccoli (cooked) - 34 mg 12% IDR	 Sweet Potatoes - 31 mg 11% IDR	 Dried Shiitake Mushrooms - 31 mg 11% IDR
 Baked Potatoes (no skin) - 30 mg 11% IDR	 Boiled Potatoes - 29 mg 10% IDR	 Bamboo Shoots - 27 mg 10% IDR	Source: Lopez M. J.; Mohiuddin S. S. Biochemistry, Essential Amino Acids. StatPearls Publishing LLC, 2021. Brazil Eggs Institute, 2021.	

Consumption Profile and Overview of the Protein Industry in Brazil

The ABPA commissioned and developed a survey to study and analyze the behavior of consumers in the Brazilian market in relation to animal protein.

Certain important points stand out among the findings:

1. **98.5% of Brazilian households** eat some kind of animal protein on a regular basis.
2. **96% of Brazilian households eat eggs** and half of the population eat eggs almost every day.
3. **75% of respondents identify eggs as a nutrient-rich food** and one of the most complete found in nature, after breast milk.
4. **Poultry is eaten equally across all social classes!**
5. **More than 50% of the Brazilian population** states that they are aware that Brazil is the largest poultry exporter in the world!
6. **80% of the Brazilian population** eats poultry at least 2 to 3 times a week.
7. **Among the pork cuts, pork chops and ribs are the Brazilian favorites!**
8. **The majority of the Brazilian population already recognizes pork as a healthy protein**, due to the strict sanitary control that currently exists.
9. **Approximately 50% of respondents recognize** the convenience of preparing pork.
10. **30% of the Brazilian population** states that they have changed the frequency of purchasing animal proteins as a result of the pandemic.

*Survey carried out by the Center for Advisory and Market Research (CEAP) with a sample of 2,500 interviews conducted in all regions of Brazil, all social classes and different age groups.

Sustainability

Talking about sustainability has never been more pressing than it is today. It is important to have an active communication to share the truths of our industry. And when it comes to animal production, **vocation** is a keyword.

Brazil is one of the largest food producers, with a great capacity for agricultural production. This is due to the fact that our country has **natural climatic, territorial, and cultural features** that give us important advantages in terms of **sustainability**.

The **favorable climate** provides both the availability of inputs and lower energy consumption in production systems, in addition to better animal welfare.

The **vast availability of inputs** – such as grains, water, and land – allows for better competitiveness. Also, the organization of the industries, especially **in the vertically integrated system**, enables us to have better sanitary control and social impact. All of this in addition to **very strict environmental legislation**.

Food safety cannot be ensured without taking into consideration the capacity of the different regions and their populations. There needs to be development for everyone. Therefore, it is necessary to recognize the limits and responsibilities that are imposed on us. To be sustainable is to reckon that the environment is essential, that society needs development, and that malnutrition in all its forms remains a global challenge.

Feeding the world in a sustainable way will be one of our most challenging tasks in the coming decades. The COVID-19 pandemic that we are facing reinforces the need to work to achieve balance in a world of great contrasts. According to the latest **Global Report on Food Crises (GRFC 2020)**, almost 135 million people in 55 countries experienced acute hunger in 2019. Since the beginning of the COVID-19 pandemic, these numbers have increased further. Although food and agricultural commodities are seen in many countries as essential and are often unrestricted, supply chains have been slowed and disrupted by transport delays, closed markets, and export restrictions.

The Brazilian poultry and pork industries continued to pursue their goal of feeding the world during this very difficult time.

Read more on page 27.

It is a fact that all agricultural activities face frequent challenges in maintaining the balance between the use of natural resources and the production of affordable food. There is no denying that there is a need for continuous improvement that allows for cleaner, more efficient, and at the same time

more competitive production. After all, this is the true concept of sustainable development – it allows for the necessary economic growth and ensures the preservation of the environment and social development for current and future generations.

We continue to evolve, imbued with our ability to feed the world and aware that we are responsible for the present and committed to a better future.

LEARN MORE:
Global Report on Food Crises (GRFC 2020)

The Brazilian Association of Animal Protein (ABPA) has therefore been working hard on campaigns for sustainable development and supporting initiatives to meet the **Sustainable Development Goals (SDGs)** of the United Nations.

Sustainable Development Goals (SDGs) United Nations (UN)

The UN SDGs aim to tackle the challenges of humankind based on 17 goals and 169 targets in areas such as hunger, sanitation, biodiversity, ethics, and human and social rights.

ABPA, as a member and partner of the International Poultry Council (IPC), has committed to focus on five of the 17 UN Sustainable Development Goals, and to encourage its members to implement measures that can contribute to the achievement of these goals.

This industry goes beyond!

Brazilian poultry and pork companies are already implementing measures that address practices related to almost all SDGs!

The issue of combating hunger and the motto “sem fronteira para alimentos” (food without borders) are used by ABPA. Brazil's responsibility as a major food supplier to the world has been further reinforced during this pandemic.

ABPA understands that sustainable poultry and pork production is constantly evolving and that each initiative contributes to this process.

LEARN MORE:
Food Without Borders

Animal Welfare

Animal welfare is part of the agenda of sustainable production, and it is increasingly emphasized in Brazil.

The regulatory framework in **Brazil** includes humane slaughter standards (Normative Instruction 3/2000), and Normative Instruction 56/2008 establishes recommendations for Best Practices for Farm Animal Welfare and for Economic Interest in production and transportation systems, including our **poultry** and **pork** chains.

The publication of **Normative Instruction N° 113**, of December 16, 2020, which establishes good handling and animal welfare practices in commercial pig farms, also consolidates the trends that are already being adopted by several Brazilian companies with regard to animal welfare in pig farming. **There are 54 articles, divided into 10 chapters, that address the various factors and practices that affect animal welfare, such as facilities, environment, handling, and training.**

This standard represents another important regulatory advance for Brazil. However, since 1952, the Regulation on Industrial and Sanitary Inspection of Products of Animal Origin has established industry obligations regarding animal welfare in all species intended for industrial slaughter.

NORMATIVE INSTRUCTION N° 113 December 16, 2020

Biosecurity: The Importance of the One Health Approach

The current scenario of outbreaks of Avian Influenza (AI) and African Swine Fever (ASF) in several countries around the world demonstrates the relevance of biosecurity measures for poultry and pork production chains.

Brazil has never recorded any case of AI, and since the 1980s it has not recorded any cases of ASF!

We have learned more and more about the **importance of isolation and distancing for disease prevention**. The biosecurity procedures used in farms are no different. The more restricted the circulation of people and animals, and the greater the hygiene of the environment and the people who operate it, the lower the risk of diseases.

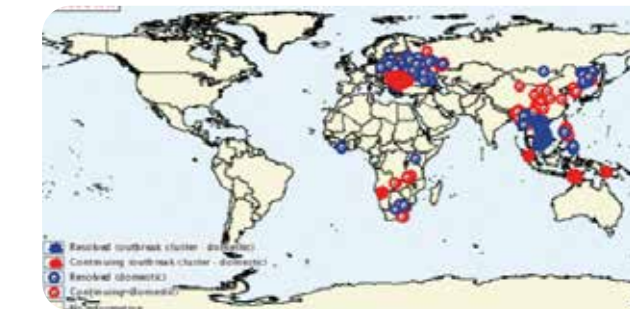

The adoption of **biosecurity measures** aims to prevent the entry and spread of diseases in the herd and provide better conditions to preserve the health of the animals and, consequently, the safety of food and even the welfare of workers.

OUTBREAKS OF AVIAN INFLUENZA

Source: OIE. January 2005 to December 2020.

OUTBREAKS OF AFRICAN SWINE FEVER

Source: OIE. January 2005 to December 2020.

ABPA coordinates, with the support of its Directive Council, two groups focused on the prevention and contingency of diseases in Brazil:

GEPIA - Special Group for the Prevention of Avian Influenza

GEPESA - Special Group for the Prevention of African Swine Fever

In this sense, the importance of the **One Health** concept is emphasized. It takes into consideration the interdependence of human health and animal health and their links to the health of the ecosystems in which they are located.

Some of the main biosecurity measures on farms are:

- Isolation and delimitation of the areas of the farms, with restricted access for people and animals outside the production system;
- Sanitation of vehicles and equipment that enter the farms;
- Quality assurance and hygiene of feed and water;
- Pest control;
- Standstill between lots;
- Correct disposal of waste, residues, and effluents, among others.

Given the position of leadership of Brazil in the world market, **biosecurity** – in addition to being a factor of competitiveness – is a commitment to food safety!

Brazil is deemed to be a storehouse of food for the world and our responsibility goes beyond our borders. **It goes from our farms to the tables of millions of consumers in more than 150 countries.**

Biosecurity is fundamental for maintaining the health of the herds and public health; it can be didactically divided into internal and external biosecurity on farms. External biosecurity prevents diseases that do not exist in the herds from entering the farms, while internal biosecurity prevents the diseases that exist on the farm from spreading among the herd. For a biosecurity system to be appropriately effective, all the links in the chain must be engaged in this purpose: that is, farmers and farm workers, animal transporters and those responsible for the logistics, slaughterhouses, hatcheries, stocks or animals used for restocking, technicians, and outsourced service providers, such as vaccinators, commercial representatives — that is to say, absolutely everyone. A point that deserves to be highlighted in this issue of biosecurity is that, in most cases, diseases enter the herd through animals used for restocking or on animal transport vehicles, which does not reduce the importance of the other factors listed here. Thus, the mixing of lots must be minimized as far as possible on the farms. In addition, biosecurity plays a key role in reducing the use of drugs in poultry and pig farms, especially antimicrobials.

Luizinho Caron, veterinarian, pork and poultry health - Embrapa Pork & Poultry.

Preventive Actions During the Pandemic

Preserving jobs, income, food safety and social peace, having the safety of our employees as a priority. The essence that drives poultry and pig farming in Brazil was even more evident during the COVID-19 pandemic.

Since the beginning of the pandemic in Brazil, ABPA and its members have created **groups to tackle the crisis**, and a set of actions came into effect on March 12, before the country started to quarantine.

Several other protocols have been developed for the most varied areas of activities – transportation, food hygiene, farm structure, etc. Cutting-edge technologies for monitoring, implementing physical distancing in commuting and cafeterias,

and expanding the use of PPEs were just some of the advances that were first implemented at slaughterhouses in Brazil.

A major protocol, developed in partnership with São Paulo’s Albert Einstein Hospital, broadly and without restrictions standardized the protection of employees during the pandemic. All of this aimed to ensure the supply of food to Brazil and to all nations that rely on our protein supply.

Protecting the Health of our Employees

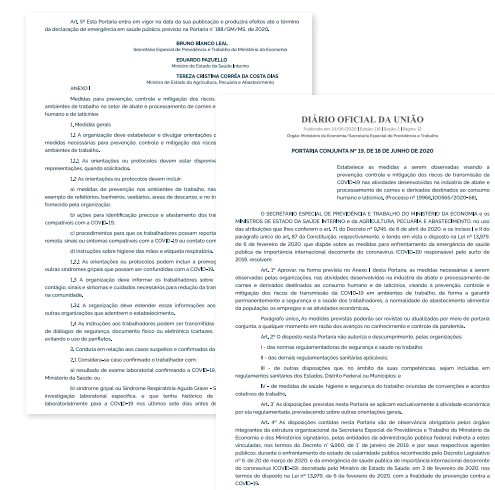

Preventive Measures in the Industry During the Pandemic

Today, there is no doubt the poultry and pork industries are essential for Brazil. This was proven by the inclusion of these industries in essential activities, whose continuity of production was guaranteed by Presidential Decree 10,282, published on March 20, 2020, and which gained even more strength with **Interministerial Ordinance n° 19** dedicated to the animal protein industry.

However, many efforts were dedicated to raising awareness and encouraging protection inside and outside slaughterhouses. Several campaigns were developed for this purpose. One of them was **“Alimente a Esperança” (Feed the Hope)**, which included messages to employees and society.

The activities did not cease, even during the Christmas festivities. For example, we remembered

The Essence that Unites Us.

The Essence that Unites Us

SUMMARY OF ACTIONS

- 5 industry protocols;
- ABPA & the Albert Einstein Hospital Protocol for the Industry;
- 11 videos in several campaigns aimed at tackling the pandemic;
- The “Feed the Hope” campaign, which reached over 4 million people, and other sub-campaigns with the same objective;
- Crisis management groups focused on combating the pandemic together with employees, the press, the government, and society;
- Actions to build trust in the target markets of the export sector.

Sectoral Brands of ABPA

ABPA, in partnership with Apex-Brasil, has represented the poultry and pork exporting sectors in Brazil for more than 15 years. Over the years, this partnership has resulted in the creation of four brands – **Brazilian Chicken, Brazilian Egg, Brazilian Breeders and Brazilian Pork** – through Sectoral Projects, which aim to promote and position poultry proteins, eggs, pork and poultry genetic material around the world.

These **Sectoral Projects** are part of commercial and image promotion actions of Brazilian chicken meat, pork meat, eggs and poultry genetic material in the foreign market. To promote sectoral brands, this partnership with Apex-Brasil boosts the exports of poultry and pork products through the recovery of markets and access to those that are still closed for these products.

In order to achieve the objectives proposed by the sectoral brands, these actions range from participation in international trade fairs, business roundtables with foreign importers, the visits of journalists and opinion makers to Brazil, the preparation of promotional and

communication materials, studies in the defense of interests in specific markets and public relations, among many other actions to promote our image and encourage international trade.

ABPA DATA

Launched on April 2020, **ABPA DATA** is an online platform that was designed and developed exclusively for our members.

This platform aims **to make statistics more accessible to our members**, in order to assist them in their scenario and market analyses. International trade data are available on the platform for all proteins of animal origin, information on the main players worldwide, as well as information on the poultry and pork production chain and the monitoring of industry inputs, such as soybean and corn.

Since its launch, ABPA DATA has evolved constantly. With numerous responsive and dynamic panels, this platform has become increasingly robust and complete.
